

Name: _____

Learning Target: I can identify what is a conductor or insulator?

Date: _____

Makey Makey

Did you know everything in this world is either a conductor or an insulator?

An item is a **conductor** when the material that allows electrons to flow.

An **insulator** is a material that does not allow electrons to flow.

Is it conductive?

Test items for conductivity. Lay items across the tape tracks to see if they are conductive. List items on the chart below after testing.

Conductive	Non-Conductive

What **conclusions** can you draw from your material testing?
